Problem Statement

To Build a customizable food preparation from the home app which is capable of taking ingredients from the user and recommending recipes based on that along with the nutrition values. Also apart from this, the application must keep track of users' nutrition and also recommend recipes based on personal features.

RECIPE SELECTION

Huevos Rancheros

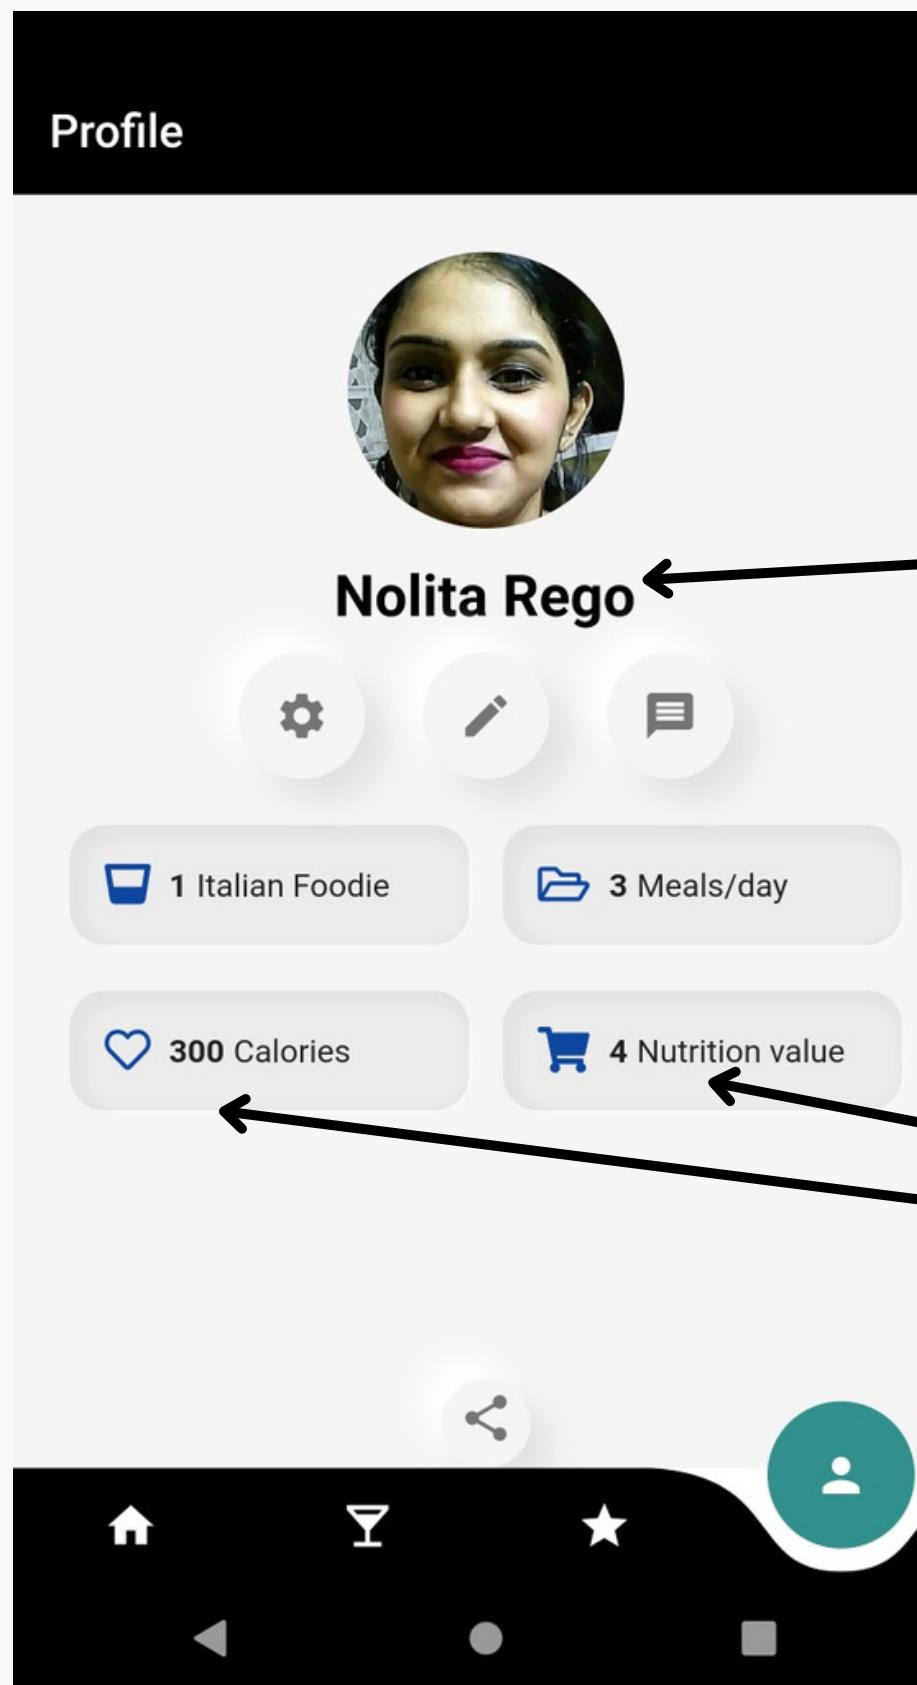

Everyone loves a taco, or even a small taquito with a cool glass of something. Pile on the tomatillo salsa, curtido and fresh guacamole. With versatile, customisable dishes, Mexican food lends itself to big sharing dinners and casual help-yourself feasts. We could eat Mexican for every meal with huevos rancheros for breakfast and pulled pork tacos for supper.
